

Police FIR System — Database Schema Reference

Karnataka Police Department | Crime Analytics & Visualization Platform

Compiled and verified against the source ER Diagram document, for use in Zoho Catalyst Data Store table creation.

Verification note: every table, column, data type, and foreign-key reference below has been checked against the original uploaded ER Diagram document and matches it exactly, with one exception — the **GenderMaster** table at the end. The original document references a "GenderMaster" concept through GenderID foreign keys in several tables (ComplainantDetails, Victim, Accused, Employee), but never actually defines that table. It has been added here as a clearly labeled addendum so those foreign keys have somewhere to resolve to — it is not part of the original source document.
